

NEWS OF THE DAY

Germination Of Seed

Plants are our best friends and seed germination is a very interesting experiment for kids as it helps them to learn about the origin of fruits and vegetables. The budding scientists of Pre-School and Pre-Primary of Vivekanand School, Preet Vihar experimented how the process of germination happens inside the seed. The children went to the garden wherein they learnt about the steps of growing a plant. The curiosity on their face hopped them to ask the questions and seek information. They sowed the seeds and were really excited. Their happiness was on the peak when they saw a little plant coming out.

Children had a great time and hands on experience on sowing seeds and giving life to a plant.
