

Water Saving Tips For Week 3

Be efficient- Aerators should be used in schools, offices and homes to regulate the flow of water.

Aerators help in reducing the water flowing from the tap which in turn reduces water wastage

Be equipped -Get water tank alarms installed to prevent wastage of water due to overflow

Be harvester- Collect rain water in buckets and store for cleaning and washing purposes.

Be thrifty-Don't leave food in the utensils. Dirty utensils require more water to be washed properly.

Be frugal-Use a bowl in the sink for washing fruits and vegetables, avoid doing it under running water.
