

Water Saving Tips For Week 1

Be wise - Open the faucet (tap) slowly to mellow down the flow of water to avoid unnecessary wastage of water.

Use efficiently- Pour only as much water in a glass that is required to quench your thirst and if any of it still remains unconsumed cover the glass with a lid and drink it later.

Be alert- Report for leakages immediately wherever you see. Fixing the leaking taps doesn't take much of time but it can save significant amount of water.

Be careful- Ensure that your bottle caps are tightly closed so as to prevent spilling of water because every drop counts.
